General Certificate of Education
June 2008
Advanced Subsidiary Examination

PHYSICS (SPECIFICATION A)
Unit 2 Mechanics and Molecular Kinetic Theory

PA02

Thursday 22 May 2008 1.30 pm to 2.30 pm

For this paper you must have:

- a calculator
- a pencil and a ruler
- a data sheet insert.

Time allowed: 1 hour

Instructions

- Use black ink or a black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer the questions in the spaces provided. Answers written in margins or on blank pages will not be marked.
- Show all your working.
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The maximum mark for this paper is 50. This includes up to 2 marks for the Quality of Written Communication.
- The marks for questions are shown in brackets.
- A *Data Sheet* is provided as a loose insert to this question paper.
- Questions 1(c) and 3(a) should be answered in continuous prose. In these questions you will be marked on your ability to use good English, to organise information clearly and to use specialist vocabulary where appropriate.

PA02

Answer **all** questions in the spaces provided.

- 1 (a) (i) State **two** conditions necessary for an object to be in equilibrium.

.....

.....

.....

.....

- 1 (a) (ii) For each condition state the consequence if the condition is not met.

.....

.....

.....

.....

(4 marks)

Figure 1 shows a pole vaulter holding a uniform pole horizontally. He keeps the pole in equilibrium by exerting an upward force, U , with his leading hand, and a downward force, D , with his trailing hand.

weight of pole = 200 N
length of pole = 3.7 m

1 (b) Calculate for the situation shown in **Figure 1**,

1 (b) (i) the force, U ,

.....

.....

1 (b) (ii) the force, D .

.....

.....

.....

(3 marks)

1 (c) Explain the effect on the magnitudes of U and D if the vaulter moves his leading hand closer to the centre of gravity of the pole and the pole is still in equilibrium.

You may be awarded additional marks to those shown in brackets for the quality of written communication in your answer.

.....

.....

.....

.....

.....

.....

(3 marks)

- 2 **Figure 2** shows a sledge moving down a slope at constant velocity. The angle of the slope is 22° .

Figure 2

The three forces acting on the sledge are weight, W , friction, F , and the normal reaction force, R , of the ground on the sledge.

- 2 (a) With reference to an appropriate law of motion, explain why the sledge is moving at constant velocity.

.....

.....

.....

.....

.....

.....

(2 marks)

- 2 (b) The mass of the sledge is 4.5 kg. Calculate the component of W ,

- 2 (b) (i) parallel to the slope,

.....

.....

.....

2 (b) (ii) perpendicular to the slope,

.....

.....

.....

(2 marks)

2 (c) State the values of F and R .

F

R

(2 marks)

6

Turn over ►

- 3 The graph shows how the velocity, v , of a car varies with time, t .

- 3 (a) Describe the motion of the car for the 50 s period.

You may be awarded additional marks to those shown in brackets for the quality of written communication in your answer.

.....

.....

.....

.....

.....

.....

(3 marks)

3 (b) The mass of the car is 1200 kg. Calculate for the first 20 s of motion,

3 (b) (i) the change in momentum of the car,

.....

.....

.....

.....

3 (b) (ii) the rate of change of momentum,

.....

.....

3 (b) (iii) the distance travelled.

.....

.....

(4 marks)

Turn over ►

- 4 A kettle, rated at 2.5 kW, is used to raise the temperature of 1.2 kg of water from 20°C to 100°C and then convert some of the water to steam.

specific heat capacity of water $= 4200 \text{ J kg}^{-1} \text{ K}^{-1}$
 specific latent heat of vaporisation of water $= 2.3 \times 10^6 \text{ J kg}^{-1}$

- 4 (a) Calculate

- 4 (a) (i) the time taken to raise the temperature of the water from 20°C to 100°C,

.....

.....

.....

.....

- 4 (a) (ii) the additional time taken for the kettle to convert 10% of the water to steam.

.....

.....

.....

(4 marks)

- 4 (b) State **two** reasons why in practice, the actual time taken in part 4(a)(i) will be longer.

.....

.....

.....

.....

(2 marks)

6

5 (a) 6.7 mol of an ideal gas in a rigid container exerts a pressure of 110 kPa at a temperature of 25°C.

5 (a) (i) Calculate the volume of the container.

.....

.....

.....

5 (a) (ii) Calculate the average kinetic energy of a molecule of the gas.

.....

.....

.....

5 (a) (iii) Deduce the pressure exerted by the gas if the average kinetic energy of the gas molecules is doubled.

.....

.....

.....

(5 marks)

5 (b) Two of the assumptions about the behaviour of the molecules of an ideal gas are that they move with *random motion* and make *elastic collisions* with the walls of the container.

State and explain what is meant by

5 (b) (i) random motion,

.....

.....

.....

Question 5 continues on the next page

Turn over ►

5 (b) (ii) elastic collisions.

.....

.....

.....

(3 marks)

8

- 6 A pile driver is used to drive cylindrical poles, called piles, into the ground so that they form the foundations of a building. **Figure 3** shows a possible arrangement for a pile driver. The hammer is held above the pile and then released so that it falls freely under gravity, until it strikes the top of the pile.

- 6 (a) State the main energy changes that take place as the hammer is falling.

.....

.....

.....

(1 mark)

- 6 (b) The hammer has a mass of 250 kg and falls 4.5 m before striking the pile. After impact the hammer and pile move downwards together. Calculate

- 6 (b) (i) the speed of the hammer just before impact,

.....

.....

- 6 (b) (ii) the momentum of the hammer just before the impact,

.....

.....

Question 6 continues on the next page

Turn over ►

- 6 (b) (iii) the speed of the hammer and pile immediately after impact if the mass of the pile is 2000 kg.

.....

.....

.....

(4 marks)

- 6 (c) After an impact the hammer and the pile move so that the pile sinks into the ground to a depth of 0.25 m.

Calculate

- 6 (c) (i) the loss of kinetic energy of the hammer and pile,

.....

.....

.....

- 6 (c) (ii) the average frictional force the ground exerts on the pile while bringing it to rest.

.....

.....

.....

(4 marks)

- 6 (d) The process is repeated several times and each time the hammer is raised 4.5 m above the pile. Suggest why the extra depth of penetration is likely to decrease with each impact.

.....

.....

(2 marks)

Quality of Written Communication (2 marks)
