Answer **all** the questions.

- 1 (a) A balanced diet is essential for good health.

Complete the following passage by using the most appropriate terms from the list to fill the gaps.

Each term **should not** be used more than once.

**haemoglobin**

**iron**

**collagen**

**obese**

**calcium**

**anorexic**

**sodium**

A balanced diet is one which provides an adequate intake of energy and nutrients for the maintenance of our body. If energy intake exceeds energy usage over a period of time, an individual can become .....

The deficiency disease anaemia can be caused by a lack of the mineral ..... in the diet. As a result of this deficiency, the body is unable to produce sufficient amounts of the protein ..... in red blood cells. [3]

- (b) The Body Mass Index (BMI) is one way of determining whether a person is underweight or overweight.

BMI can be calculated using the formula:

$$\text{BMI} = \frac{\text{mass in kg}}{(\text{height in m})^2}$$

Calculate the BMI of a female of mass 69 kg and a height of 1.67 m.

Show your working. Give your answer to **one decimal place**.

Answer = ..... [2]

- (c) Another way of determining whether a person is underweight or overweight is to use a graph showing the relationship between height and body mass.

Fig. 1.1 is an example of this type of graph.

Fig. 1.1

- (i) Using Fig. 1.1, state the category into which a female who has a body mass of 69 kg and a height of 1.67 m is placed.

..... [1]

- (ii) There are many factors that determine the category into which a person is placed. Fig. 1.1 does not take into account all of these factors.

Suggest why the female in (c)(i) might be placed in the wrong category.

.....  
.....  
.....  
..... [2]

- (d) Name **two** diseases associated with obesity.

1 .....

2 ..... [2]

2 Fig. 2.1 represents a water molecule.

**Fig. 2.1**

**(a)** Water molecules are polar. As a result, they attract each other.

**Draw a second water molecule on Fig. 2.1.**

Your drawing should show:

- the bond(s) between the two molecules
- the name of the bond
- the charges on each atom.

**[3]**

- (c) Water is important in many biological reactions.

Complete Table 2.1 by writing an appropriate term next to each description.

**Table 2.1**

| description                                                                        | term |
|------------------------------------------------------------------------------------|------|
| the type of reaction that occurs when water is added to break a bond in a molecule |      |
| the phosphate group of a phospholipid that readily attracts water molecules        |      |

[2]

[Total: 13]

3 (a) The enzyme DHPS is involved in the production of folic acid in bacteria.

- The substrate for DHPS is a molecule known as PABA.
- The enzyme DHPS is inhibited by the drug sulfonamide.

Fig. 3.1 shows the structure of PABA and that of sulfonamide.

Fig. 3.1

(i) Diagrams **X**, **Y** and **Z** represent these enzyme molecules and their active sites.

State the letter, **X**, **Y** or **Z**, that most accurately represents the enzyme DHPS.

..... [1]

- (ii) Using the information in Fig. 3.1, explain why sulfonamide acts as a competitive inhibitor of DHPS.

.....

.....

.....

.....

.....

.....

..... [3]

Turn over

(b) Fig. 3.2 shows the effect of increasing the concentration of the substrate (PABA) on the rate of reaction.

- Curve **A** shows the rate of reaction without the presence of the competitive inhibitor sulfonamide.
- Curve **B** shows the rate of reaction in the presence of the competitive inhibitor sulfonamide.

**Fig. 3.2**

Explain the effect of increasing the concentration of substrate on the rate of reaction;

(i) without inhibitor,

.....

.....

.....

.....

.....

..... [3]

(ii) with inhibitor.

.....

.....

.....

.....

..... [2]

**10**

- (c)** Antibiotic resistance in bacteria is becoming an increasing problem.

Describe how a sulfonamide-resistant population of bacteria could develop.

..... [4]

**QUESTION 3(d) STARTS ON PAGE 11**

**Turn over**

(d) Hospitals can check to see if a strain of bacteria causing an infection is resistant to a range of antibiotics by using a **multodisc**. A multodisc contains different antibiotics.

- The bacteria are isolated from a patient.
- The bacteria are spread on nutrient agar in a Petri dish.
- The multodisc is placed on the agar.

Fig. 3.3 shows a Petri dish with the bacteria, in which is placed a multodisc containing six different antibiotics.

**Fig. 3.3**

(i) Explain why there are clear areas of agar in the Petri dish.

.....

.....

..... [1]

(ii) Using Fig. 3.3, name the antibiotic that is most effective against the bacteria causing the infection.

..... [1]

12

- (iii) Suggest **three** reasons why a hospital might use a multodisc to select the most suitable antibiotic for treating a patient.

.....

.....

.....

.....

.....

..... [3]

- (e) Drugs, such as antibiotics, are often first discovered in the natural environment.

Explain why it may become increasingly difficult to discover new drugs in the future.

2 ..... [2]

[Total: 15]

- 5 (a) Coronary heart disease (CHD) can be described as a multifactorial disease. This means that a number of different risk factors contribute to the development of the disease.

Fig. 5.1 shows the percentage of cases of CHD in a population to which each risk factor contributed.

Fig. 5.1

- (i) When you add up the different risk factor percentages for the population you find that it is greater than 100%.

Suggest why.

.....  
 ..... [1]

- (ii) State **two** further risk factors that are **not** shown in Fig. 5.1.

1 .....  
 2 ..... [2]

Turn over

(iii) Smoking is a contributing factor in 19% of all cases of CHD.

Table 5.1 lists a number of effects of cigarette smoke.

Use a tick (✓) to indicate which component of cigarette smoke causes each effect.

The first row has been done for you.

**Table 5.1**

| effect                                                | nicotine | carbon<br>monoxide |
|-------------------------------------------------------|----------|--------------------|
| increases heart rate                                  | ✓        |                    |
| constricts arterioles                                 |          |                    |
| damages the lining of arteries                        |          |                    |
| reduces the ability of<br>haemoglobin to carry oxygen |          |                    |
| makes platelets sticky                                |          |                    |

[4]

(b) Cholesterol is transported in the form of lipoproteins. High levels of low density lipoproteins (LDLs) in the blood are a risk factor in heart disease.

Outline the role of LDLs in the formation of an atheroma.

.....

.....

.....

.....

.....

..... [2]

- (c)** An atheroma can grow to a point where it restricts blood flow in a coronary artery, causing coronary heart disease (CHD).

Fig 5.2 shows a method of reducing the symptoms of CHD.

A stent is a tubular device, containing a 'balloon', which can be inserted into the damaged artery. The stent can be opened up by inflating the balloon.

**Fig. 5.2**

Explain how the inserted stent would reduce the symptoms of CHD.

[6]

**(b)** It has been found that 98.4% of chimpanzee DNA is identical to that of a human.

**(i)** Suggest how the information obtained by DNA analysis can be useful to taxonomists.

.....

.....

.....

..... [2]

- (ii) State **two** types of evidence, other than biochemical evidence, that are used by taxonomists when classifying organisms.

.....

.....

..... [2]

- (c) Cytochrome C is a protein found in living organisms. The structure of cytochrome C varies between different organisms. However, closely related organisms have similar cytochrome C.

Fig. 5.1 shows a possible evolutionary tree for vertebrates.  
Common ancestors are indicated by the number 1 and various letters.

**Fig. 5.1**

State the **letter** of the common ancestor that has cytochrome C which will be:

**most** similar in structure to common ancestor 1 .....

**least** similar in structure to common ancestor 1 ..... [2]

- (d) The pine marten is a small mammal that is rare in the United Kingdom. Its numbers are particularly low in Wales and there have been few confirmed sightings of this animal in the past 50 years. There have been plans to introduce pine martens from other areas of the United Kingdom into Wales to increase the size of the population.

The DNA of museum specimens of Welsh pine martens in the National Museum of Wales was tested, the most recent specimens dating from 1948. The DNA analysis suggests that Welsh pine martens are genetically distinct from those found elsewhere in the United Kingdom.

- (i) The relevance of this analysis has been questioned by some scientists.

Suggest why the findings from the museum specimens may not relate closely to the current pine marten population of the United Kingdom.

.....

.....

..... [1]

- (ii) Suggest why some people are concerned about the plan to introduce pine martens from other areas into Wales.

- 6 An important aspect of food production is maximising productivity. Maximum productivity can be achieved in a number of different ways.
- (a) In selective breeding, humans look for variation between members of the same species and use this variation to improve productivity.
- (i) State the **two** different causes of variation.

- 1 .....
- 2 ..... [2]

Fig. 6.1 is a scattergraph that shows the growth rate and egg productivity in a flock of chickens.

Fig. 6.1

(ii) The growth rate of the chickens in Fig. 6.1 shows **continuous** variation.

Describe **three** characteristics of this type of variation.

.....

.....

.....

.....

.....

.....

.....

.....

..... [3]

(iii) A chicken breeder divides the flock into four groups, **A, B, C** and **D**, as shown in Fig. 6.1.

State which group of chickens, **A, B, C** or **D**, he should use to breed from in order to improve the growth and productivity of the flock.

..... [1]

(iv) Suggest **two undesirable** consequences of selective breeding in chickens.

.....

.....

.....

.....

.....

.....

..... [2]

(v) The wild ancestor of the domestic chicken is the red jungle fowl found in the rainforests of South East Asia.

Explain why it is important to preserve the population of the red jungle fowl.

.....

.....

.....

.....

.....

..... [2]

Turn over

- (b) In the past, domestic chickens were given antibiotics as a growth promoter.
- (i) When antibiotic growth promoters were used, it was claimed that the meat was of better quality, with less fat and increased protein content.

Suggest **two further** benefits of using antibiotics.

1 .....  
.....

2 .....  
..... [2]

- (ii) The use of antibiotics as growth promoters in animal production was banned in the European Union in 2006.

Suggest a concern that led to this ban.

**antibody**

**specific**

**antigen**

**vaccination**

**artificial**

**vaccines**

The body can acquire immunity in a number of different ways.

In passive immunity, .....are introduced directly into the body. This may occur via breast milk or the placenta, in which case it is described as ..... immunity. This immunity provides the growing child with valuable protection until its immune system has developed fully. It is sometimes important to provide immediate protection, such as when a person has a wound that could be contaminated with tetanus bacteria. In this case, suitable blood serum from another individual is injected into the bloodstream to provide ..... immunity.

Edward Jenner pioneered the technique of stimulating the immune system into action so that the body develops immunity without developing the symptoms of the disease. Jenner's technique mimics the way in which the body would develop ..... immunity from direct contact with the pathogen and the stimulation of the primary response. Nowadays, a harmless form of the ..... is injected so that the body develops antibodies and memory cells for future defence. This technique is known as .....

2 Malaria is a disease caused by a eukaryotic parasite.

(a) State **two** features of the malarial parasite that indicate that it is **not** a prokaryote.

1 .....

2 ..... [2]

(b) In a piece of word-processed homework, a student stated that one species of parasite that causes malaria is called:

*Plasmodium Vivax*

State **one** error made by the student.

.....

..... [1]

(c) The malarial parasite is carried by an insect, the female *Anopheles* mosquito.

(i) Describe how the mosquito transmits the malarial parasite to a human.

.....

.....

.....

.....

.....

.....

.....

..... [3]

- (ii) In order to fight the spread of malaria, insecticides have been used in areas where the *Anopheles* mosquito breeds.

One problem that can occur when using insecticides in this way is the development of insecticide resistance.

Suggest **one other** reason why some people might be concerned about using insecticides.

..... [1]

- (iii) Suggest how the effects of insecticide use on a population of *Anopheles* mosquitoes could be measured **and** state the steps that should be taken in order to produce valid and reliable results.

3 Cholesterol is an important biological molecule.

(a) State **two** roles of cholesterol in living organisms.

- 1 .....
- .....
- 2 .....
- ..... [2]

(b) Fig. 3.1 represents the structure of a cholesterol molecule.

Fig. 3.1

(i) Identify **one** way in which the molecular structure of cholesterol is similar to the molecular structure of a carbohydrate.

..... [1]

(ii) Cholesterol is transported in the blood within molecules of low-density lipoprotein (LDL).

Name **two** molecules that combine with cholesterol to form LDLs.

.....

..... [2]

- (iii) LDL and a similar molecule, high-density lipoprotein (HDL), carry cholesterol in the blood. LDL and HDL affect the formation of atheromas in the arteries.

Describe the different ways in which LDLs and HDLs affect the formation of atheromas.

*In your answer you should make clear the differences in the involvement of LDL and HDL in the formation of atheromas.*

..... [7]

**Turn over**

- (c) (i) In countries such as the UK, in which red meat forms a large part of the diet, people tend to have high levels of blood cholesterol compared with people in countries in which little red meat is eaten.

Suggest why diets with a high red meat content are associated with high blood cholesterol.

.....

.....

.....

.....

..... [2]

- (ii) Name a disease, other than atherosclerosis, for which high blood cholesterol is a risk factor.

..... [1]

[Total: 15]

- 4 The system used by scientists for classifying living things has developed from the original classification system proposed by Carl Linnaeus around 250 years ago.

(a) Complete the following paragraph by using the most appropriate term(s).

The system of classifying organisms according to their observable features or genetic characteristics is called ..... Organisms are classified into large groups which are then subdivided into increasingly smaller groups. A system such as this is called a ..... The term that describes the evolutionary relationship between organisms is .....

[3]

- (b) New Zealand is made up of two large and many smaller islands and is situated a long distance from any other land mass.

In New Zealand there is a large variety of birds not found elsewhere in the world.

Among its many species of the parrot family, Psittacidae, are:

- kaka (*Nestor meridionalis*)
- kea (*Nestor notabilis*)
- kakapo (*Strigops habroptila*)

These birds are shown in Fig. 4.1 **on the insert**.

- (i) State **two** characteristics that birds, such as parrots, share with other members of the animal kingdom.

1 .....

2 ..... [2]

- (ii) Name the **domain** to which the parrot belongs.

..... [1]

10

- (iii) Species that are more closely related in evolutionary terms have more genes in common than species that are less closely related.

Using the information provided, suggest the likely genetic relationship between the three parrot species.

[illegible]

**QUESTION 4 CONTINUES ON PAGE 11**

**Turn over**

(c) The kakapo is one of the world’s largest and rarest parrot species. The variation in mass of adult birds in the kakapo population has been reported to be between 950 g and 4000 g.

(i) Define the term *variation*.

.....  
.....  
.....  
..... [2]

(ii) Suggest **two** reasons why the kakapo varies in size.

1 .....  
2 ..... [2]

(iii) Suggest **two** reasons why the reported mass range for the adult kakapo may not be accurate.

1 .....  
.....  
2 .....  
..... [2]

(d) At some point in the past, distinct species of New Zealand parrot are likely to have arisen from an original ancestral population.

State the name of the process by which new species arise **and** suggest the mechanisms necessary for this process to occur.

*name of process* .....  
*mechanisms necessary for this process to occur* .....

END OF QUESTION PAPER

mock papers 4

1 All organisms are made up of one or more cells.

(a) For each of the descriptions below, put a cross ☐ in the box that corresponds to the correct statement about the features of animal, plant and prokaryotic cells.

(6)

(i) Genetic material is

- ☐ **A** separate strands in animal and prokaryotic cells
- ☐ **B** separate strands in animal and plant cells
- ☐ **C** circular in animal and prokaryotic cells
- ☐ **D** circular in animal and plant cells

(ii) Centrioles are present in

- ☐ **A** plant cells only
- ☐ **B** animal cells only
- ☐ **C** prokaryotic cells only
- ☐ **D** animal, plant and prokaryotic cells

(iii) The cell surface membrane is present in

- ☐ **A** plant cells only
- ☐ **B** animal cells only
- ☐ **C** prokaryotic cells only
- ☐ **D** animal, plant and prokaryotic cells

(iv) Pits are found in the cell walls of

- ☐ **A** plant cells only
- ☐ **B** prokaryotic cells only
- ☐ **C** plant and prokaryotic cells
- ☐ **D** animal, plant and prokaryotic cells

(v) The tonoplast may be present in

- ☐ **A** plant cells only
- ☐ **B** prokaryotic cells only
- ☐ **C** plant and prokaryotic cells
- ☐ **D** animal, plant and prokaryotic cells

(vi) Cell walls are found in

- ☐ **A** plant cells only
- ☐ **B** prokaryotic cells only
- ☐ **C** plant and prokaryotic cells
- ☐ **D** animal, plant and prokaryotic cells

(b) The diagram below shows a structure found in the cytoplasm of both plant and animal cells, as seen using an electron microscope.

(i) Name the structure shown in the diagram.

(1)

(ii) Name the parts labelled **X** and **Y**.

(2)

**X** .....

**Y** .....

(Total for Question 1 = 9 marks)

2 The phenotype of an organism is affected by its genotype and its environment.

(a) The table below shows the mean difference in two phenotypes, height and mass, from a study on several human identical twins and non-identical twins. Each pair of twins was brought up together.

| Phenotype                   | Type of twins |               |
|-----------------------------|---------------|---------------|
|                             | Identical     | Non-identical |
| Mean height difference / cm | 1.7           | 4.4           |
| Mean mass difference / kg   | 1.9           | 4.6           |

Explain how the data in the table show the effects that genotype and the environment have on the phenotypes.

(3)

(b) When a drug is being developed, it goes through a series of different test stages. Some of these are shown below.

(i) Suggest why a drug can be tested on rats before testing on humans.

(2)

.....

.....

.....

.....

(Total for Question 4 = 10 marks)

5 Meiosis is involved in producing gametes such as sperm cells and egg cells.

(a) Describe **three** structural differences between a human sperm cell and a human egg cell.

(3)

1 .....

.....

.....

2 .....

.....

.....

3 .....

.....

.....

(b) When a sperm cell reaches an egg cell, enzymes are released from the head of the sperm. Explain the reasons for the release of these enzymes.

(2)

.....

.....

.....

.....

.....

.....

(c) Describe what happens in the egg cell once the sperm cell nucleus has entered it. (2)

.....

.....

.....

.....

.....

(d) In plants, a double fertilisation occurs.

(i) One fertilisation involves a male gamete nucleus fusing with the egg cell nucleus. Give **two** functions of this fertilisation. (2)

1 .....

.....

2 .....

.....

(ii) In the second fertilisation, the other male gamete nucleus fuses with two polar nuclei forming a triploid structure. Name the triploid structure formed. (1)

.....

(Total for Question 5 = 10 marks)

6 The diversity of ant species in a habitat can be used as an indicator of environmental conditions and conservation status.

(a) A study of the effect of high copper levels on ant diversity was undertaken in Brazil. Ants were collected in the same way at three different sites in one habitat. The number of different species at each site was recorded. Site 1 and Site 2 were near a copper mine and had high levels of copper present. Site 3 had normal levels of copper. The amount of vegetation present at each site was also recorded.

The results are shown in the table below.

| Site | Number of ant species found | Amount of vegetation present |
|------|-----------------------------|------------------------------|
| 1    | 14                          | Very little                  |
| 2    | 16                          | Little                       |
| 3    | 45                          | Rich and dense               |

(i) Using the information in the table, what is the evidence that ant diversity can be used as an indicator of environmental conditions?

(1)

(ii) It has been suggested that there is no **direct** effect of copper on ants. Suggest how the data in the table support this suggestion.

(2)

(b) Seedbanks have been set up around the world to help conserve rare plant species. The process for storing seeds includes the following stages.

(i) Suggest **two** reasons why the seeds need to be dried and then stored in cold conditions.

(2)

1 .....

.....

.....

2 .....

.....

.....

(ii) Suggest why seed germination is tested at regular intervals.

(2)

.....

.....

.....

.....

.....

(Total for Question 6 = 9 marks)

**7** A study was undertaken to investigate the effect of calcium ion concentration on the mass of shoots and the mass of pods of bean plants.

Two bean plants were grown in a pot and watered regularly with a solution containing all the required mineral ions except calcium. When the plants had produced mature bean pods, the shoots and the pods were dried and the mean dry masses were recorded.

This experiment was repeated three times, each with a different calcium ion concentration added to the watering solution.

The results are shown in the graph below.

(a) (i) Using the information in the graph, compare the effect of calcium ion concentration on the mean dry mass of shoots and the mean dry mass of pods in bean plants.

(3)

.....

.....

.....

.....

.....

.....

.....

.....

(ii) Suggest how calcium ions contributed to the change in mass in the shoot of the bean plant.

(1)

.....

.....

(b) During this investigation, it was found that there was a relationship between calcium ion concentration in the watering solution and total nitrogen uptake by the bean pods. The data are shown below.

| Calcium ion concentration in the watering solution / mg dm <sup>-3</sup> | Total nitrogen uptake by the bean pods / mg |
|--------------------------------------------------------------------------|---------------------------------------------|
| 0                                                                        | 70                                          |
| 75                                                                       | 220                                         |
| 150                                                                      | 290                                         |
| 300                                                                      | 350                                         |

(i) Describe the relationship between calcium ion concentration and total nitrogen uptake by the bean pods.

(2)

8 A student investigated the antimicrobial properties of tea tree oil.

She cut three identical discs of blotting paper. She soaked disc 1 in 100% tea tree oil, disc 2 in 50% tea tree oil and 50% vegetable oil and disc 3 in 100% vegetable oil. She then placed all three discs onto a single suitably-prepared Petri dish as shown in diagram 1.

She incubated the Petri dish at 25°C for 24 hours. The results of the incubation are shown below in diagram 2.

(a) Suggest what is meant by the phrase **suitably-prepared Petri dish**.

(2)

.....

.....

.....

.....

.....

.....

(b) (i) Describe the function of disc 3. (1)

.....

.....

.....

(ii) Explain why clear zones are found around disc 1 and disc 2. (2)

.....

.....

.....

.....

.....

.....

(iii) The clear zone around disc 1 is not a circle. Suggest how you would calculate the mean diameter of this clear zone. (2)

.....

.....

.....

.....

.....

.....

QUESTION 8 CONTINUES ON THE NEXT PAGE

(c) The mean diameters of the clear zones around disc 1 and disc 2 were found to be the same. This suggests that both strengths of tea tree oil had equally effective antimicrobial properties.

Describe how you would determine the minimum strength of tea tree oil that would be as effective as the 100% tea tree oil.

(3)

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(d) Suggest **one** reason why it was good safety practice to incubate the Petri dish at 25°C rather than at 37°C.

(Total for Question 8 = 12 marks)

TOTAL FOR PAPER = 80 MARKS

mock papers 5

1 The phenotype of an individual is dependent on a variety of factors.

- (a) (i) Complete the following sentence by writing the most appropriate word or words on the dotted lines. (2)

In polygenic inheritance, the phenotypes are affected by forms of genes called ..... found at many ..... on chromosomes.

- (ii) The graph below shows some data on the numbers of students of different heights.  
Height is an example of polygenic inheritance.

State the heights that represents the median and the mode for this group of students. (2)

Median height ..... cm  
Mode height ..... cm

- (b) (i) Complete the following short passage by writing the most appropriate word or words on the dotted lines. (2)

Animal fur colour is an example of a phenotype. The phenotype of an animal can be the result of an interaction between the ..... and the .....

- (ii) The enzyme tyrosinase is involved in producing dark coloured fur in cats. Tyrosinase is active at the cat's body temperature.

Some cats have a defective form of tyrosinase. The defective tyrosinase is inactive at normal body temperature, but becomes active in the cooler extremities of cats living in a cold environment.

The diagrams below show four cats with different fur colour distributions. Shaded areas represent dark coloured fur and non-shaded areas represent light coloured fur.

Place a cross ☒ in the most appropriate box to select the diagram which represents:

(3)

- |                                                   |                                       |                                       |                                       |                                       |

(Total for Question 2 = 9 marks)

3 In the 1990s, a scientist called Woese suggested a new way of grouping organisms into domains.

(a) The table below shows Woese’s three domains and gives some of the characteristics of each domain.

| Domain | Some characteristics of each domain                                                                                                    |
|--------|----------------------------------------------------------------------------------------------------------------------------------------|
| P      | True nucleus absent<br>Small (70S) ribosomes present<br>Smooth endoplasmic reticulum absent<br>RNA polymerase made up of 14 subunits   |
| Q      | True nucleus present<br>Large (80S) ribosomes present<br>Smooth endoplasmic reticulum present<br>RNA polymerase made up of 14 subunits |
| R      | True nucleus absent<br>Small (70S) ribosomes present<br>Smooth endoplasmic reticulum absent<br>RNA polymerase made up of 4 subunits    |

(i) Place a cross ☒ in the box which shows the two domains which are most **distantly related**. (1)

- ☐ A P and Q
- ☐ B P and R
- ☐ C Q and R

(ii) Place a cross ☒ in the box which shows the domain that represents eukaryotic organisms. (1)

- ☐ A P
- ☐ B Q
- ☐ C R

(iii) The diagram below represents the phylogenetic tree for the three domains.

Place a cross (x) in the box on the diagram that correctly identifies the eukaryotic domain.

(1)

(iv) Give the name of **one** of the other two domains.

(1)

(b) One domain includes the plants and these have cells with a cell wall.

\*(i) Describe the structure of a plant cell wall.

(4)

[illegible]

(ii) A student studied the cell wall arrangement between two adjacent plant cells. He noticed several features which he could not name. Two of these are described in the table below.

Complete the table by writing in the name of each feature described.

(2)

| Feature described                                                                 | Name of feature |
|-----------------------------------------------------------------------------------|-----------------|
| Site where there was no cell wall and the cytoplasm linked the two adjacent cells |                 |
| Dark line that is the boundary between one cell and the next cell                 |                 |

(Total for Question 3 = 10 marks)

- 4 Meiosis leads to the production of gametes and is important in allowing genetic variation to occur.
- (a) The diagram below shows one homologous pair of chromosomes during early meiosis.  
Four genes (A, B, D and E) and the crossing over point have been labelled.

At the end of meiosis, four gametes will have been produced, each with a different combination of alleles.  
Complete the diagram below to show the combination of alleles for the two recombinant chromosomes.

(1)

(b) Sperm cells are gametes. They contain mitochondria in their mid region.

- (i) The photograph below shows a mitochondrion as seen using an electron microscope.

(3)

CNRI / Science Photo Library  
Magnification x 90 000

Name the labelled structures shown in the photograph above.

- P .....
- Q .....
- R .....

- (ii) Explain the function of mitochondria in sperm cells.

(3)

.....

.....

.....

.....

.....

.....

.....

.....

.....

- (c) In some species of mammal, at fertilisation most of the sperm cell enters the egg cell. The fertilised cell then divides by mitosis.
- (i) A sperm cell containing 65 mitochondria fertilises an egg cell containing 100 000 mitochondria. Calculate the percentage of the total mitochondria in this fertilised cell that come from the sperm cell. Show your working.

(2)

Answer ..... %

- (ii) State how many cells there would be after the fertilised egg has divided, by mitosis, **four** times.

(1)

(Total for Question 4 = 10 marks)

5 The rice plant is a type of grass and reproduces by producing grains.

Tom Myers / Agstockusa / Science Photo Library

- (a) The rice grains are full of starch.
- (i) Starch is a polymer of one monosaccharide.  
Name this monosaccharide.

(1)

.....

\*(ii) Describe **two** ways in which the structure of starch is related to its function.

(4)

Structure .....

.....

Function.....

.....

Structure .....

.....

Function.....

.....

(b) Starch is made up of amylose and amylopectin. An investigation was undertaken to study the effect of temperature on amylose production in rice grains. Three different varieties of rice plant, A, B and C, were grown at a mean temperature of 23°C until they had produced mature rice grains. All other variables were kept constant.

Fifty rice grains were then collected from each variety and the mean percentage of amylose in a rice grain was determined.

This investigation was repeated at a mean temperature of 31°C.

The results are shown in the graph below.

- (i) Describe the effect of temperature on the mean percentage of amylose in the rice grains of all three varieties of rice plant. (2)

.....

.....

.....

.....

.....

- (ii) Using the information in the graph, suggest which set of data is least supportive of the statement that ‘temperature has an effect on the percentage of amylose present in rice grains’. Explain your answer. (3)

**6** Biodiversity, including both species richness and genetic diversity, is an important concept to be considered when organising captive breeding programmes.

(a) Explain what is meant by each of the following terms.

(3)

Niche .....  
.....  
.....  
.....

Species richness .....  
.....  
.....  
.....

(b) One way to measure genetic diversity is to find the percentage of genes that have different alleles.

The table below shows the percentage of genes that have different alleles in four types of cat.

| Type of cat  | Percentage of genes with different alleles (%) |
|--------------|------------------------------------------------|
| Cheetah      | 4                                              |
| Domestic cat | 23                                             |
| Lion         | 12                                             |
| Ocelot       | 21                                             |

\*(i) Using the information in the table above and your own knowledge, suggest why the cheetah is the cat at most risk if the environment changes.

(3)

(ii) Cheetahs are unusual amongst the big cats.

Cheetah and cub  
Dr P. Marazzi / Science Photo Library

A female cheetah often mates with several different males and gives birth to two or three cubs at a time, each having a different father.

Suggest why this may be advantageous to cheetahs.

(2)

.....

.....

.....

.....

.....

.....

(c) Rafa was a male cheetah involved in breeding programmes in several zoos. The table below shows some data from Rafa’s studbook.

| Name of zoo housing Rafa | Event         | Date of event |
|--------------------------|---------------|---------------|
| WINSTON                  | Birth of Rafa | 24 Dec 1974   |
| SD-WAP                   | Transfer      | 26 Nov 1980   |
| LAGUNA HI                | Transfer      | 9 Apr 1982    |
| SD-WAP                   | Transfer      | 5 Dec 1984    |
| BATON ROUGE              | Transfer      | 11 Feb 1986   |

Suggest what effect transferring Rafa from one zoo to another had on genetic diversity in this species.

(2)

(d) Place a cross ☒ in the box to the right of the statement that correctly describes an endemic animal.

(1)

| Statement                                                   |                          |
|-------------------------------------------------------------|--------------------------|
| Ducks that migrate from one continent to another            | <input type="checkbox"/> |
| House fly that is found in all continents except Antarctica | <input type="checkbox"/> |
| Cheetahs that are exclusive to one continent                | <input type="checkbox"/> |

(Total for Question 6 = 11 marks)

**7** Pollen germination and pollen tube growth are important stages in plant sexual reproduction.

(a) The diagram below shows a pollen grain on the stigma of a flower.

- (i) On the diagram above, draw a line to show the route taken by the pollen tube, from the pollen grain to the micropyle. (2)
- (ii) The table below shows the structures labelled on the diagram. Place a tick (✓) in the box next to each one in which the chromosome number increases at fertilisation. (2)

| Labelled structure | Tick (✓) if chromosome number increases at fertilisation |
|--------------------|----------------------------------------------------------|
| A                  |                                                          |
| B                  |                                                          |
| C                  |                                                          |
| D                  |                                                          |
| E                  |                                                          |

(b) An investigation was undertaken to study the effect of the element boron on the growth of pollen tubes.  
A large number of pollen grains was placed in a dilute sugar solution. Every six hours, for 30 hours, 500 pollen grains were removed and the length of the pollen tube of each was measured. The mean length of the pollen tubes was then calculated.  
This was repeated with boron added to the dilute sugar solution.

The results are shown in the graph below.

(i) Using the information in the graph, compare the mean pollen tube length in these two sugar solutions, over this 30-hour period.

(3)

.....

.....

.....

.....

.....

.....

.....

.....

(ii) Using the result of this investigation, a student concluded that boron was necessary for pollen tube growth.  
Suggest why another student disagreed with this conclusion.

(1)

.....

.....

.....

.....

(iii) Using the information in the graph, suggest an appropriate conclusion for the effect of boron on the rate of growth of pollen tubes.

(1)

.....

.....

.....

(iv) Suggest the advantages to flowering plants of increased pollen tube growth.

.....

8 Plants usually take up nitrogen as nitrate ions for use in growth.

- (a) An investigation was undertaken to study the effect of nitrate ion concentration on mitosis in the root tip of wheat seedlings.

Wheat seedlings were grown in a mineral solution containing a nitrate ion concentration of  $3.3 \text{ mmol dm}^{-3}$ . Root tip samples were taken and the number of cells undergoing mitosis per 500 cells was counted. This was repeated using a nitrate ion concentration of  $6.6 \text{ mmol dm}^{-3}$ . The results are shown in the table below.

| Nitrate ion concentration / $\text{mmol dm}^{-3}$ | Number of cells undergoing mitosis per 500 cells |
|---------------------------------------------------|--------------------------------------------------|
| 3.3                                               | 25                                               |
| 6.6                                               | 19                                               |

- (i) Using the information in the table, describe the effect of nitrate ion concentration on mitosis in root tips.

(2)

- (ii) Suggest why a prediction of the number of cells undergoing mitosis, if the nitrate ion concentration used were  $9.9 \text{ mmol dm}^{-3}$ , would be unreliable.

(2)

(iii) To count the number of cells undergoing mitosis, a root tip squash was carried out.

Give **two** potential safety risks associated with the root tip squash technique. For one of the risks you have given, suggest a precaution to reduce the risk.

(3)

.....
